

DATASHEET

Unified AI & Data Security Platform

Your data doesn't stay in one place. Your security shouldn't either.

Sensitive data moves across endpoints, SaaS, cloud, AI apps, and collaboration platforms; where it gets copied, transformed, and shared. Most security tools see only part of that picture. Cyberhaven sees all of it.

Security teams running separate tools for data loss prevention (DLP), insider risk (IRM), AI security, and data discovery (DSPM) pay a hidden tax: Blind spots where context gets lost, alerts that don't connect, and investigations that take too long.

Cyberhaven is the Unified AI & Data Security Platform that brings DLP, DSPM, insider risk management, and AI security together on one platform, built on a shared data lineage foundation so every capability has the same context and every alert is actionable.

**See more. Miss less.**

Holistic visibility across endpoints, cloud, SaaS, on-prem, and AI tools, with lineage that shows where data came from and where it went.

**Fewer false positives. Faster decisions.**

Context-aware AI classification eliminates the noise that slows teams down. Focus on real risk, not alert volume.

**One platform. Less to manage.**

Replace disconnected tools with a single platform. Less operational overhead, fewer vendor contracts, and no lost context when switching between products.

5x

Faster incident investigation

2x

Faster incident resolution

90%

Fewer false positives

How Cyberhaven Works

Legacy tools are limited to scanning data content or watching for specific user actions. They miss what happened before, the full history of a file, who touched it, how it moved, and what changed along the way.

Cyberhaven's Data Lineage foundation traces that complete history. Every classification decision, every policy enforcement, and every investigation starts with that context. That's why accuracy is higher, investigations are faster, and teams spend less time second-guessing alerts.

Capability	What it does
 Data Loss Prevention	Stops sensitive data from leaving the organization across email, web, cloud storage, USB, and AI apps, with context that reduces false positives.
 Data Security Posture Management	Maps sensitive data at rest and in motion across SaaS, IaaS, PaaS, on-prem, and hybrid environments. Reduces exposure before incidents occur.
 Insider Risk Management	Identifies and investigates risky user behavior using Linea AI agents that analyze billions of workflows to distinguish accidents from intent.
 AI Security	Detects shadow AI usage, enforces guardrails on what data reaches AI tools, and maintains visibility into AI-driven data flows, so teams can enable AI adoption without creating new exposure.

Our Unique Advantages: The Magic Behind Cyberhaven

Data Lineage

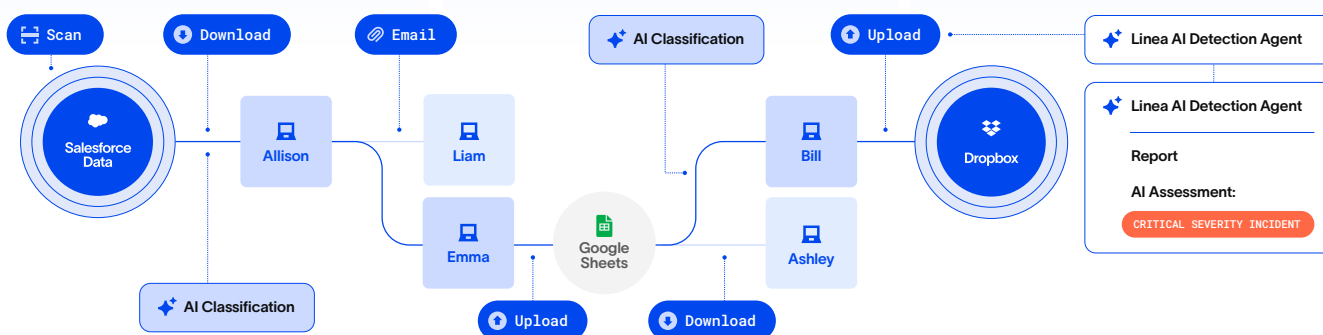

Traces the complete flow of data, providing vital context about where the data came from, who's interacted with it, and how it's been modified over time.

AI Classification

Applies advanced AI to lineage, context, and content, achieving dramatically higher accuracy and more effective enforcement.

Agentic AI

Linea AI agents precisely analyze billions of workflows and every piece of data to find and report on insider risks.

How It's Built

Holistic visibility and control

Data at rest, in motion, and in use. Coverage across cloud, on-prem, hybrid, and endpoints. All major exfiltration vectors.

Deep understanding of data

Lineage traces the complete flow of data. AI Classification applies lineage, context, and content to achieve higher accuracy. Linea AI agents analyze billions of workflows to surface insider risk automatically.

Easy to operate

Simple administration. Non-disruptive to endpoints. Agentic AI handles detection and analysis so analysts spend time on decisions, not triage.

Protect Your Data Wherever It Lives and Moves.

About Cyberhaven

Cyberhaven pioneered data lineage for enterprise security. Trusted by leading enterprises across financial services, technology, healthcare, and government, Cyberhaven delivers unified data security, DLP, DSPM, IRM, and AI Security, from a single platform.
