cyberhaven

Enhance data governance and incident response

Cyberhaven provides the full history of data movement in your organization, giving you instant context into risks to your data and what improvements to security and governance need to be made.

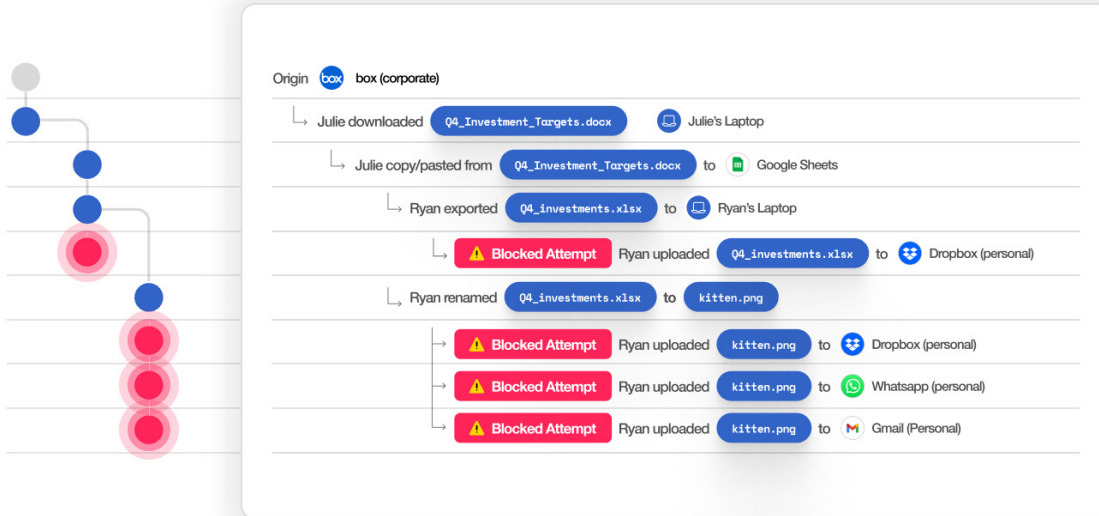

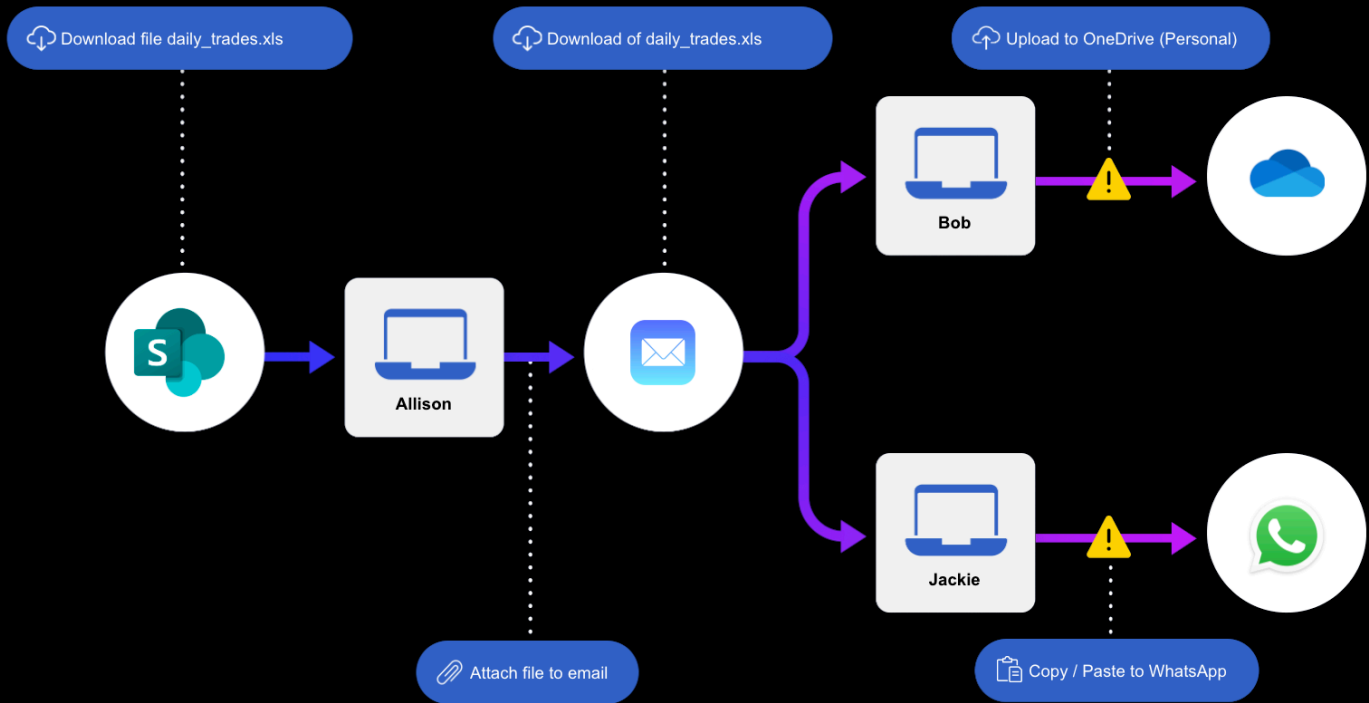

Flexible response options to keep your team moving fast

In the fast-paced world of finance, being unable to act quickly can lead to millions of dollars in lost revenue. Cyberhaven offers teams a range of policy enforcement options to help find the right balance between security and productivity.

The magic behind Cyberhaven is data lineage

Data lineage is a technology that's only available from Cyberhaven that powers best-in-class identification and protection of sensitive data.

Discover unknown unknowns

Without the need to create any policies, data lineage reveals unknown unknowns about how employees are accessing, creating, and using sensitive data. These insights help teams build better data security programs through better workforce education and complete visibility into the impact of any policies before they are deployed.

Rich context for classification

For every piece of data, lineage reveals where it originated, how it was handled, and who interacted with it. This metadata can be used alongside content analysis to classify data and enable protections for sensitive data.

Accelerate internal investigations

When incidents occur, the historical context provided data lineage instantly reveals the entire lead-up to the incident. This lets analysts quickly differentiate between malicious intent and honest mistakes, and reveal gaps and misconfigurations they may have contributed to a potential breach.

cyberhaven

"Staying ahead of the competition means guarding against insider threats. Cyberhaven gives us visibility into how data flows within our company and stops insider threats in real time."
