

DATA SECURITY FOR THE AGENTIC ENTERPRISE

Complete Data Lineage for Every Workflow

Data lineage tracks what your AI agents do to your data, whether a person is driving or another agent is.

Cyberhaven watches the entire conversation, the steps an agent takes, the files it touches, the tools it calls, so a mistake in one agent doesn't silently spread to the next before anything else notices.

Human → Agentic

Agentic → Agentic

Conversation-level understanding that goes beyond prompt inspection

Most tools evaluate one message at a time. Cyberhaven watches every step an agent takes, so problems that only surface after several actions still get caught.

Data lineage serves as an essential investigation context

While other tools reveal the actions an agent took, Cyberhaven specifies what actions were performed on which data, the origin of that data, and its subsequent destination.
