

Data Security for *Law Firms*

Cyberhaven protects privileged client data as it moves across matters, attorneys, and AI tools, without slowing down the practice.

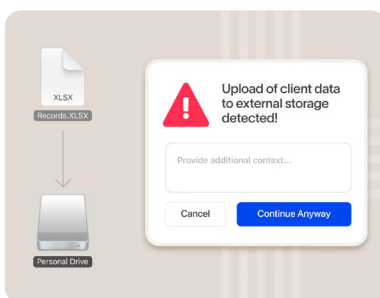

Law firms of every size share a data security problem most tools were not built to solve. Matter files and work product move constantly across attorneys, into AI tools, and out to co-counsel and clients, where a single misdirected document, unauthorized disclosure, or AI-related leak can waive privilege and end a client relationship.

HOW CYBERHAVEN PROTECTS LAW FIRMS

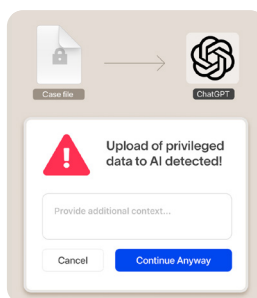

Protect privileged data everywhere it moves

Trace matter files and work product from your document management system to email, devices, and AI tools, preserving attorney-client privilege at every step.

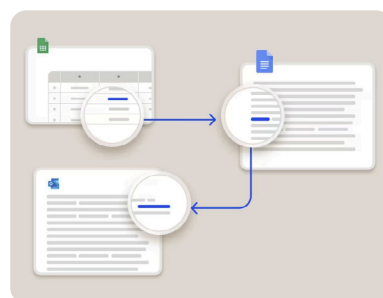

Stop departing-attorney data theft

Lateral moves are routine; client files leaving with them are not. Cyberhaven flags unusual activity before a departure and blocks exfiltration in the moment.

Adopt legal AI without risking privilege

See what flows into GenAI drafting and research tools and stop privileged material before it leaves the firm.

Meet outside counsel guidelines and client audits

Demonstrate control over client data with a complete, defensible record of who accessed what, when, and where it went.

Supports your obligations under:

ABA Model Rule 1.6

Outside counsel guidelines

Client security audits

HIPAA and GLBA data handled in client matters

AI-Native Data Security Platform

AI Security

Discover every AI tool and agent attorneys use across endpoints and the browser, score each for risk, and record agent activity (prompts, tool calls, file reads, and responses) with full data context, including when privileged material is involved.

Insider Risk Management

Identify and investigate risky user behavior using AI agents that analyze billions of workflows to distinguish accidents from intent, from a misdirected email to a departing attorney collecting client files.

Data Security Posture Management

Map privileged and client data at rest and in motion across SaaS, IaaS, PaaS, on-premises, and hybrid environments, from the document management system to shared drives. Reduce exposure before incidents occur.

Data Loss Prevention

Stop privileged and client data from leaving the firm across email, web, cloud storage, USB, and AI apps, with context that reduces false positives.

Our Unique Advantages: The Magic Behind Cyberhaven

Where it originated

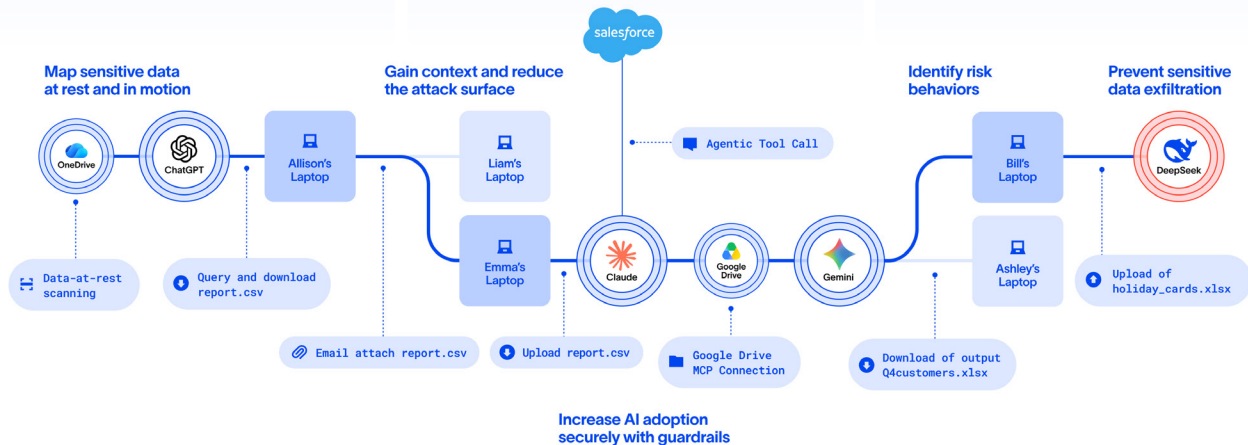

Whether the merger agreement in your DMS or the deposition exhibit in a shared drive, different matters produce data in different places.

How it was handled

Client files move in recognizable ways, from the matter workspace to co-counsel email to the e-discovery platform.

Who interacted with it

Different practices produce different work, from M&A deal teams to litigation associates, and lineage knows the difference.

“When you have a traditional system and you’re just looking at all the blocked actions, there’s just a lot of noise. Data lineage helps us identify data and movement that you don’t usually get to see with traditional DLP.” — Mike Santos, Head of Security, Cooley
