

Data Security for *Technology Companies*

Cyberhaven protects source code, roadmaps, and customer data as they move across repos, endpoints, and AI tools.

Technology companies share a data security problem most tools were not built to solve. Source code, designs, and customer data move constantly from repos and build systems to endpoints, personal clouds, and AI coding assistants, where a single leak can hand years of engineering work to a competitor.

82% of GenAI apps are medium, high, or critical risk

39.7% AI interactions carry sensitive data

32.3% ChatGPT use via personal accounts

HOW CYBERHAVEN PROTECTS TECHNOLOGY COMPANIES

 **Protect source code**
Trace code, designs, and models from repos and build systems to endpoints, personal clouds, and AI tools, without slowing engineering velocity.

 **Ship safely with AI**
See what flows into coding assistants and GenAI tools and stop proprietary code and customer data before they leave the company.

 **Stop offboarding theft**
Job changes are routine; source code and roadmaps leaving with them are not. Cyberhaven flags unusual activity before a departure and blocks exfiltration in the moment.

 **Prove control to customers**
Demonstrate control over customer data with a complete, defensible record of who accessed what, when, and where it went, ready for security reviews and customer audits.

Supports your obligations under:

SOC 2

ISO 27001

Trade secret protection

Customer security reviews and data processing agreements

AI-Native Data Security Platform

AI Security

Discover every AI tool and agent engineers use, score each for risk, and record agent activity with full data context, including when source code is involved.

Insider Risk Management

Identify and investigate risky user behavior using AI agents that analyze billions of workflows to distinguish accidents from intent, from an accidental paste to a departing engineer collecting repos.

Data Security Posture Management

Map source code, models, and customer data at rest and in motion across SaaS, IaaS, PaaS, on-premises, and hybrid environments, from repos to shared drives. Reduce exposure before incidents occur.

Data Loss Prevention

Stop source code, models, and customer data from leaving the company across email, web, cloud storage, USB, and AI apps, with context that reduces false positives.

Our Unique Advantages: The Magic Behind Cyberhaven

“Cyberhaven created a transformational difference. We now have really substantial visibility.”
— David Seidman, Head of Platform Security, Plaid
